

AFL Player Props Markov Summary

Generated 2026-05-27 23:02 from WheeloRatings + Odds API. Scope: Western Bulldogs v Melbourne only; GWS v Brisbane returned no live player prop bookmakers. Marks were unavailable through Odds API.

Summary

Cleaned card: 10 best risk-adjusted alternate lines. A_BET: 4, B_BET: 6. Best book split: PointsBet (AU) 7, Unibet 2, SportsBet 1.

Grade	Bet	Stake	Book	Price	EV	QI	Alt	Markov Path
A	Jack Gunston Goals Over 2.5	0.50u	Unibet	1.79	66.3%	95.0	0.4892	Strong -> Dominant -> Mispriced -> Elite
A	Isaac Keeler Goals Over 0.5	0.50u	PointsBet (AU)	2.10	51.6%	95.0	0.2895	Strong -> Dominant -> Mispriced -> Elite
A	Karl Amon Disposals Under 26.5	1.00u	PointsBet (AU)	1.87	34.6%	93.5	0.2574	Strong -> Dominant -> Mispriced -> Elite
A	Nick Watson Goals Over 1.5	0.50u	Unibet	1.38	22.9%	93.6	0.1611	Strong -> Dominant -> Good -> Elite
B	Bradley Hill Disposals Over 19.5	0.50u	PointsBet (AU)	1.87	26.3%	86.5	0.1726	Lean -> Dominant -> Mispriced -> High
B	Max Hall Disposals Under 21.5	0.50u	SportsBet	1.90	24.9%	84.2	0.1574	Lean -> Dominant -> Good -> High
B	Cam Mackenzie Tackles Over 3.5	0.40u	PointsBet (AU)	2.10	29.0%	83.8	0.1554	Lean -> Positive -> Mispriced -> High
B	Marcus Windhager Disposals Over 20.5	0.50u	PointsBet (AU)	1.87	19.5%	82.9	0.1176	Lean -> Positive -> Good -> High
B	Connor Macdonald Disposals Over 18.5	0.50u	PointsBet (AU)	1.87	19.5%	82.9	0.1176	Lean -> Positive -> Good -> High
B	Jack Sinclair Disposals Over 27.5	0.50u	PointsBet (AU)	1.87	18.3%	82.3	0.1089	Lean -> Positive -> Good -> High

Markov Commentary

Each bet is scored as a four-state chain: projection support -> probability edge -> price/EV state -> QI confidence. The strongest bets transition cleanly through all four states.

1. A_BET - Jack Gunston Goals Over 2.5 @ 1.79 (Unibet)

Markov path: Strong -> Dominant -> Mispriced -> Elite | score 12/12 | stake 0.50u | EV 66.3% | QI 95.0 | Alt score 0.4892.

Wheelo projects 3.75 goals avg against a 2.5 line, creating a +1.2 stat gap for the over. The Markov state path is Strong -> Dominant -> Mispriced -> Elite, meaning the row moves from projection support into a positive probability state, then through the price/EV state, and finishes with 95.0 QI. Model probability is 92.9% versus market 55.9%, producing 66.3% EV.

Ladder: Over 2.5 @ 1.79 EV 66.3%; Over 3.5 @ 2.95 EV 81.6%; Over 1.5 @ 1.22 EV 20.8%

Risk: Goals are highest variance; price must compensate for scoring role volatility.

2. A_BET - Isaac Keeler Goals Over 0.5 @ 2.10 (PointsBet (AU))

Markov path: Strong -> Dominant -> Mispriced -> Elite | score 12/12 | stake 0.50u | EV 51.6% | QI 95.0 | Alt score 0.2895.

Wheelo projects 1.0 goals avg against a 0.5 line, creating a +0.5 stat gap for the over. The Markov state path is Strong -> Dominant -> Mispriced -> Elite, meaning the row moves from projection support into a positive probability state, then through the price/EV state, and finishes with 95.0 QI. Model probability is 72.2% versus market 47.6%, producing 51.6% EV.

Risk: Goals are highest variance; price must compensate for scoring role volatility.

3. A_BET - Karl Amon Disposals Under 26.5 @ 1.87 (PointsBet (AU))

Markov path: Strong -> Dominant -> Mispriced -> Elite | score 12/12 | stake 1.00u | EV 34.6% | QI 93.5 | Alt score 0.2574.

Wheelo projects 23.3 disposals against a 26.5 line, creating a +3.2 stat gap for the under. The Markov state path is Strong -> Dominant -> Mispriced -> Elite, meaning the row moves from projection support into a positive probability state, then through the price/EV state, and finishes with 93.5 QI. Model probability is 72.0% versus market 50.0%, producing 34.6% EV.

Ladder: Under 26.5 @ 1.87 EV 34.6%; Under 25.5 @ 1.84 EV 20.6%

Risk: Disposal props are more stable, but role/rotation drift can still break projection.

4. A_BET - Nick Watson Goals Over 1.5 @ 1.38 (Unibet)

Markov path: Strong -> Dominant -> Good -> Elite | score 11/12 | stake 0.50u | EV 22.9% | QI 93.6 | Alt score 0.1611.

Wheelo projects 2.545 goals avg against a 1.5 line, creating a +1.0 stat gap for the over. The Markov state path is Strong -> Dominant -> Good -> Elite, meaning the row moves from projection support into a positive probability state, then through the price/EV state, and finishes with 93.6 QI. Model probability is 89.1% versus market 72.5%, producing 22.9% EV.

Ladder: Over 1.5 @ 1.38 EV 22.9%; Over 2.5 @ 2.23 EV 16.2%; Over 0.5 @ 1.07 EV 5.9%

Risk: Goals are highest variance; price must compensate for scoring role volatility.

5. B_BET - Bradley Hill Disposals Over 19.5 @ 1.87 (PointsBet (AU))

Markov path: Lean -> Dominant -> Mispriced -> High | score 10/12 | stake 0.50u | EV 26.3% | QI 86.5 | Alt score 0.1726.

Wheelo projects 22.0 disposals against a 19.5 line, creating a +2.5 stat gap for the over. The Markov state path is Lean -> Dominant -> Mispriced -> High, meaning the row moves from projection support into a positive probability state, then through the price/EV state, and finishes with 86.5 QI. Model probability is 67.5% versus market 50.0%, producing 26.3% EV.

Risk: Disposal props are more stable, but role/rotation drift can still break projection.

6. B_BET - Max Hall Disposals Under 21.5 @ 1.90 (SportsBet)

Markov path: Lean -> Dominant -> Good -> High | score 9/12 | stake 0.50u | EV 24.9% | QI 84.2 | Alt score 0.1574.

Wheelo projects 19.273 disposals against a 21.5 line, creating a +2.2 stat gap for the under. The Markov state path is Lean -> Dominant -> Good -> High, meaning the row moves from projection support into a positive probability state, then through the price/EV state, and finishes with 84.2 QI. Model probability is 65.7% versus market 49.1%, producing 24.9% EV.

Risk: Disposal props are more stable, but role/rotation drift can still break projection.

7. B_BET - Cam Mackenzie Tackles Over 3.5 @ 2.10 (PointsBet (AU))

Markov path: Lean -> Positive -> Mispriced -> High | score 9/12 | stake 0.40u | EV 29.0% | QI 83.8 | Alt score 0.1554.

Wheelo projects 4.111 tackles against a 3.5 line, creating a +0.6 stat gap for the over. The Markov state path is Lean -> Positive -> Mispriced -> High, meaning the row moves from projection support into a positive probability state, then through the price/EV state, and finishes with 83.8 QI. Model probability is 61.4% versus market 47.6%, producing 29.0% EV.

Ladder: Over 3.5 @ 2.1 EV 29.0%; Over 4.5 @ 2.95 EV 25.8%; Over 2.5 @ 1.33 EV 3.5%

Risk: Tackle props depend on game script and pressure exposure.

8. B_BET - Marcus Windhager Disposals Over 20.5 @ 1.87 (PointsBet (AU))

Markov path: Lean -> Positive -> Good -> High | score 8/12 | stake 0.50u | EV 19.5% | QI 82.9 | Alt score 0.1176.

Wheelo projects 22.455 disposals against a 20.5 line, creating a +2.0 stat gap for the over. The Markov state path is Lean -> Positive -> Good -> High, meaning the row moves from projection support into a positive probability state, then through the price/EV state, and finishes with 82.9 QI. Model probability is 63.9% versus market 50.0%, producing 19.5% EV.

Risk: Disposal props are more stable, but role/rotation drift can still break projection.

9. B_BET - Connor Macdonald Disposals Over 18.5 @ 1.87 (PointsBet (AU))

Markov path: Lean -> Positive -> Good -> High | score 8/12 | stake 0.50u | EV 19.5% | QI 82.9 | Alt score 0.1176.

Wheelo projects 20.455 disposals against a 18.5 line, creating a +2.0 stat gap for the over. The Markov state path is Lean -> Positive -> Good -> High, meaning the row moves from projection support into a positive probability state, then through the price/EV state, and finishes with 82.9 QI. Model probability is 63.9% versus market 50.0%, producing 19.5% EV.

Risk: Disposal props are more stable, but role/rotation drift can still break projection.

10. B_BET - Jack Sinclair Disposals Over 27.5 @ 1.87 (PointsBet (AU))

Markov path: Lean -> Positive -> Good -> High | score 8/12 | stake 0.50u | EV 18.3% | QI 82.3 | Alt score 0.1089.

Wheelo projects 29.364 disposals against a 27.5 line, creating a +1.9 stat gap for the over. The Markov state path is Lean -> Positive -> Good -> High, meaning the row moves from projection support into a positive probability state, then through the price/EV state, and finishes with 82.3 QI. Model probability is 63.3% versus market 50.0%, producing 18.3% EV.

Risk: Disposal props are more stable, but role/rotation drift can still break projection.

Method Notes

A_BET means strong Wheelo support plus a clear model edge and high QI. B_BET means positive EV with one softer state, usually a smaller projection cushion or thinner price. The alternate-line selector keeps one best risk-adjusted line per player/market/side using EV, hit-probability stability, QI, and a market volatility adjustment.
